Recipients Attention: The Hiring Manager

Dear Sir/Madam,

RE: Application for Software Developer.

I would like to apply for the Software Developer position advertised. I believe I have the skills and knowledge to make a positive contribution to the organisation in this role. I am a graduate of Masters in Information Technology degree with a major in Computer Science from the Queensland University of Technology.

I'm interested in this position because it aligns best with my studies. I have acquired the knowledge of programming languages such as – JavaScript, React.js, Node.js, PostgreSQL, MongoDB, HTML5, CSS, C# and Python. I have developed my website where I have showcased few of the projects that I have built such as a Sydney based restaurant's website using WordPress and also two other websites using react, node, bootstrap and API.

I have also applied my academic skills in developing and designing mobile and web application projects. The requirement of an academic industry based project that I did was to develop and design an interactive android application for the new students to navigate to their desired location through the campus. I had to design all the buildings of the campus and create an application to transfer all the buildings into it. Python was used in development of the project. I have the knowledge and experience of working alongside people of different backgrounds and also have worked in teams using scrum to develop projects.

I strongly believe that my profile matches the job requirements and I would be delighted to have the opportunity to work in a progressive company committed to excellence. I have been known by colleagues to always prioritize work, meet deadlines and multi-task. I would be open to relocation if preferred.

I have attached my resume for your perusal and would be pleased to attend an interview anytime at your convenience to further discuss my application. I look forward to hearing from you.

Thank you for your kind consideration.

Yours Sincerely,

Gautham Yadav Nandraj
